## **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1, 3-4, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schuster et al(6,512,761) in view of Eskicioglu et al(7,039,802).
- 3. As per claim 1, Schuster discloses a communication system enabling communications between a subscriber and a station(see fig. 2, sheet 2, col. 6, lines 48-57, a delivery device installed on a station side(col. 8, lines 46-58, fig. 2, sheet 2), and delivery device including delivery means for controlling delivery of a media stream(see col. 6, lines 46-52), accounting control means for performing accounting control based on media quality information from a subscriber side(see col. 6, lines 47, 57-63, col. 11, lines 61-67, col. 12, lines 1-17); a terminal device installed on the subscriber side(see col. 6, lines 59-64, see fig. 2, sheet 2), and terminal device including receiving means for controlling reception of the media stream(see fig. 2, sheet 2), connection information management means for managing connection information for specifying the media stream(see col. 9, lines 21-23), and media quality measurement control means for controlling measurement of media quality of the specified media stream(see col. 7, lines 50-59), generating the media quality information including a measurement result and transmitting the generated media quality information to the station(see col. 12, lines 12-67), wherein the accounting control means calculates a charge based on the media quality information

Application/Control Number: 09/918,273

Art Unit: 2131

and pays back a proper amount of money to the subscriber(see col. 5, lines 51-54, col. 11, lines 61-67, col. 12, lines 1-32, col. 15, lines 23-28), in cases of degradation of the media stream, the media quality measurement control means performs media quality measurement control in which a loss of packet is detected by continuity of packets of the specified media stream, the media quality measurement control means performs media quality measurement control in which a loss of packet is detected by continuity of packets of the specified media stream(see col. 9, lines 9-44, col. 10, lines 1-10), the media quality measurement control means uses both a timestamp and a sequence number in the packet to measure the continuity of packets(see col. 9, lines 9-38), the media quality measurement control means detects that packets are missing(see col. 10, lines 1-11), where a and b are the respective sequence number, and t and s are the respective time stamp(see col. 9, lines 9-44, col. 10, lines 1-10). Schuster is silent on authentication means for authenticating a device, which is to receive the media stream. Eskicioglu et al. discloses authentication means for authenticating a device which is to receive the media stream(see col. 3, lines 40-46, col. 4, lines 33-46). It would have been obvious to one of ordinary skill in the art at the time of the invention to include Eskicioglu's authentication means for authenticating a device which is to receive the media stream with Schuster, the motivation is that manufacturers of the set top boxes may desire that the box only be used with selected service providers(see col. 1, lines 65-67 of Eskicioglu). Thus, by authentication of the device, insures that only that device will receive the media stream, and only that media stream can be played with that device.

Page 3

4. As per claim 3, Schuster discloses wherein the delivery device further includes lost data extracting means for the media quality measurement control, and lost data extracting means

Application/Control Number: 09/918,273 Page 4

Art Unit: 2131

extracting lost data from a media stream content, with reference to the media quality information, and transmitting lost data information to the terminal device(see col. 10, lines 1-13).

- 5. As per claim 4, Schuster discloses wherein the terminal device includes quality recovery means for receiving the lost data information and recovering quality of the media stream(see col. 10, lines 1-13).
- As per claim 11, Schuster discloses wherein if the packet of the sequence number A was lost, the media quality information is constituted by a preceding sequence number (A-1), a succeeding sequence number (A+1), a preceding time stamp which is a time stamp of a packet to be located in just before the packet of the sequence number A, a succeeding time stamp which is a time stamp of a packet to be located in just after the packet of the sequence number A, and a media measurement time (see col. 9, lines 9-38, col. 10, lines 1-13).
- As per claim 12, recites limitation already addressed(see claim 1 above). Further, claim 12, Schuster discloses media quality measurement control means performs media quality measurement control in which a degradation index of a media unit is calculated, the media quality measurement control means cumulates a degree of influence of propagation of error that occurred on the specified media stream earlier in time than a picture being replayed to calculate the degradation index and transmits the degradation index as the media quality information to the station(see col. 5, lines 30-41, 50-63, col. 13, lines 24-43), and the accounting control means normalizes the degradation index that is cumulative degradation value measured from the beginning through to the end of a program and calculates a charge based on the normalized degradation index and pays back a proper amount of money to

Application/Control Number: 09/918,273

Art Unit: 2131

the subscriber, depending on the state of the degradation of the media stream(see col. 13, lines 24-43, col. 12, lines 12-32).

- 8. As per claim 13, Schuster discloses wherein the media quality measurement control means calculates the degradation index of each of subunits into which the media unit is divided(see col. 5, lines 9-38, col. 13, lines 24-43).
- 9. Same Motivation as above. As per claim 14, recites limitations already addressed (see claim 1 above). Further claim 14, Schuster discloses the media quality measurement control means cumulates a degree of influence of propagation of error that occurred on the specified media stream earlier in time than a picture being replayed to calculate the degradation index and transmits the degradation index and a position information of a degraded frame as the media quality information to the station (see col. 9, lines 9-38, col. 10, lines 1-13, col. 13, lines 24-43), the accounting control means causes a degree of importance of the degraded media unit to be reflected in a calculation of a charge with reference to the position information, and the degree of importance is an extent to which a viewer is satisfied with the delivered media(see col. 12, lines 12-32, col. 13, lines 24-43).

## Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jenise E. Jackson whose telephone number is (571) 272-3791. The examiner can normally be reached on M-Th (6:00 a.m. - 3:30 p.m.) alternate Friday's.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ayaz Sheikh can be reached on (571) 272-3795. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
